## **DETAILED ACTION**

Claims 1-10 have been cancelled. Therefore claims, 11-45 are currently pending in this application. Claims 13-31 and 34-44 are withdrawn from further consideration by the Examiner, 37 C.F.R. § 1.142(b), as being drawn to a non-elected invention. The withdrawn subject matter is patentably distinct from the elected subject matter as it differs in structure and element and would require separate search considerations. In addition, a reference, which anticipates one group, would not render obvious the other.

#### **Priority**

This application is a national-phase application of PCT Patent Application No.

PCT/EP00/06185 filed on July 03, 2000, which claims the benefit of foreign priority to Italian Application MI199A001483 filed July 06, 1999.

#### Information Disclosure Statement

Applicant's Information Disclosure Statements, filed on March 03, 2002 have been considered. Please refer to Applicant's a copy of the 1449 submitted herewith.

#### Response to Restriction

Applicants' election with traverse of Group I, claims 11, 32, 33 and 45, drawn to compounds, compositions and methods of used of compounds, compositions and methods of use

of compounds of formula I,

, depicted in claim 11, in response

Page 2

filed October 24, 2003 is acknowledged. The traversal is on the ground(s) that there is no undue

Art Unit: 1626

burden on the examiner to search and examine and search all the groups. This is found partially persuasive, therefore one method of preparing the product (i.e claim 12) have been rejoined with the elected Group I. As far as Groups III-XI are concerned, the traversal is not persuasive because the inventions are independent and distinct because there is no patentable co-action between the groups and a reference anticipating one member will not render another obvious. Each process is directed to art recognized divergent subject matter which require different searching strategies for each group.

Therefore, the restriction requirement is still deemed proper.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

#### Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 32 and 33, are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for methods for treating specific cancer diseases, does not reasonably provide enablement for all cancer diseases. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to use the invention commensurate in scope with these claims. In *In re Wands*, 8 USPQ2d 1400 (1988),

Art Unit: 1626

factors to be considered in determining whether a disclosure meets the enablement requirement of 35 U.S.C. § 112, first paragraph, have been described. They are:

- 1. the nature of the invention,
- 2. the state of the prior art,
- 3. the predictability or lack thereof in the art,
- 4. the amount of direction or guidance present,
- 5. the presence or absence of working examples,
- 6. the breadth of the claims,
- 7. the quantity of experimentation needed, and
- 8. the level of the skill in the art.

## The Nature of the Invention

The nature of the invention in claims 32 and 33, is to a method of treatment of cancer.

## The State of the Prior Art

"Cancer" is a general term that embraces many different diseases, for example, leukemia, lymphoma, sarcomas and so forth. As defined, the compounds read on treating all types of "cancer" which is broader than the enabling disclosure. Chemotherapeutic agents are frequently useful against a specific type of cancer or neoplasm and especially with the unpredictability in the state of the art there are no drugs broadly effective against all forms of cancer, (Carter, S.K. et al., Chemotherapy of Cancer; Second Edition; John Wiely & Sons: New York, 1981; Appendix C).

#### The level of skill in the art

The level of skill in the art is high. However, due to the unpredictability in the pharmaceutical art, it is noted that each embodiment of the invention is required to be individually assessed for physiological activity by in vitro and in vivo screening to determine which compounds exhibit the desired pharmacological activity and which diseases would benefit from this activity.

Art Unit: 1626

## The predictability or lack thereof in the art

Because of high level of unpredictability associated with treatment of cancer a greater amount of evidentiary support is needed to fully satisfy the requirement of 35 U.S.C 112, first paragraph. It is noted that pharmaceutical art is unpredictable, requiring each embodiment to be individually assessed for physiological activity. In re Fisher, 427 F.2d 833, 166USPQ 18 (CCPA 1970) indicates that the more unpredictable an area is, the more specific enablement is necessary in order to satisfy the statue. The nature of pharmaceutical arts is that it involves screening *in vitro* and *in vivo* to determine which compounds exhibit the desired pharmacological activities. There is no absolute predictability even in view of the seemingly high level of skill in the art. The existence of these obstacles establishes that the contemporary knowledge in the art would prevent one of ordinary skill in the art from accepting any therapeutic regimen on its face.

## The amount of direction or guidance present

The specification discloses methods of treating diseases such as leukemia and lymphoma using the compounds described in the specification. The compounds which are disclosed in the specification, which have data regarding treatment of diseases such as leukemia and lymphoma (pages 12-15), have no pharmacological data regarding the treatment of ovarian cancer or prostate cancer. Merely stating that the instant compounds are useful for treating all neoplastic disorders does not establish usefulness of the invention absent art-recognized correlation between such tests and the ultimate use.

## The presence or absence of working examples

A disclosure should contain representative examples, which provide reasonable assurance to one skilled in the art that compounds fall within the scope of a claim will posses the alleged

Art Unit: 1626

activity. See In re Riat et al. (CCPA 1964) 327 F2d 685, 140USPQ 471; In re Barr et al. (CCPA 1971) 444 F 2d 349, 151 USPQ 724. The instant specification fails to provide one example for treating one cancer disease.

#### The breadth of the claims

As defined the claims read on treating all cancer diseases which is broader than the enabling disclosure.

## The quantity of experimentation needed

Based on the unpredictable nature of the invention and the state of the prior art and the breadth of the claims, one of ordinary skill in the art would be burdened with undue "experimentation study" to determine whether the claimed compounds would treat diseases such as leukemia, colon cancer, etc. Genentech Inc. v. Novo Nordisk A/S (CA FC) 42 USPQ2d 1001, states that "a patent is not a hunting license. It is not a reward for search, but compensation for its successful conclusion" and "[p]atent protection is granted in return for an enabling disclosure of an invention, not for vague intimations of general ideas that may or may not be workable".

Therefore, in view of the Wands factors and In re Fisher (CCPA 1970) discussed above, to practice the claimed invention herein, a person of skill in the art would have to engage in undue experimentation to test which compounds would treat for example colon cancer by the method encompassed in the instant claims, with no assurance of success.

It is suggested that the claims either be limited to the diseases actually contemplated in the specification or enable the full range of this term.

#### Allowable Subject Matter

Claims 11, 12 and 45 are allowable over the prior art.

## Telephone Inquiry

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kamal Saeed whose telephone number is (703) 308-4592. The examiner can normally be reached on Monday-Friday from 8:00 AM – 5:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mr. Joseph K. McKane, can be reached at (703) 308 4537. The unofficial fax phone for this group are (703) 308-4556 or 305-3592.

When filing a FAX in Technology Center 1600, please indicate the Header (upper right) "Official" for papers that are to be entered into the file, and "Unofficial" for draft documents and other communications with the PTO that are not for entry into the file of the application. This will expedite processing of your papers.

Communication via Internet e-mail regarding this application, other than those under 35 U.S.C. 132 or which otherwise require a signiture, may be used by applicant and should be addressed to [joseph.mckane@uspto.gov]. All Internet e-mail communications will be made of record in the application file. PTO employees will not communicate with applicant via Internet e-mail where sensitive data will be exchanged or where there exists a possibility that sensitive data could be identified unless there is of record an express waiver of the confidentiality requirements under 35 U.S.C. 122 by the applicant. See the Interim Internet Usage Policy published by the Patent and Trademark Office Official Gazette on February 25, 1997 at 1195 OG 89.

Art Unit: 1626

Page 8

Any inquiry of a general nature or relating to the status of this application should be directed to the Group receptionist, whose telephone number is (703) 308-2286.

Kamal Saeed, Ph.D.

Patent Examiner, AU 1626
